

Group work for assessment – how to support our students?

Dr Fang Lou, School of Life and Medical Sciences, University of Hertfordshire, UK

Abstract

Group work is one of the major tools for effective and efficient assessment, especially with a large cohort. However, it requires careful design, planning and step by step guidance to support students. Case studies will cover group organisation, students' briefing, choosing topic, guidance on poster writing and oral presentation, and group issue discussions. Many of the steps were closely related to educational technologies.
